## NeoMonitor

NeoMonitor is a simple application designed to display information on the computer you are using. It is designed to be used for both Windows and Linux operating systems. NeoMonitor features a number of filters and display options to enable it to suit any person's individual needs. NeoMonitor's primary filtering options are: ? exact match ? partial match ? regex match ? inverse regex match ? port scan detection ? email notification ? various custom filters One of the unique features of NeoMonitor, in comparison to other similar software is that NeoMonitor can do more than simply display information on the computers it monitors. NeoMonitor is a very powerful and versatile tool if used correctly. A current community site for NeoMonitor can be found: NeoMonitor Usage: Once NeoMonitor is installed, the next step is to define the computers to be monitored. To do this, the following filter types may be selected: ? exact match ? partial match ? regex match ? inverse regex match ? port scan detection After a filter type and name has been chosen, the specific IP address for each computer to be monitored may be entered. The filter may be configured to only monitor specific IP addresses for specific port scans. NeoMonitor's Email Notification feature can be used in conjunction with NeoMonitor's other functions. Notifications can be sent out to the user if any of the following events occurs: ? port scan detection ? exact match ? partial match ? regex match ? inverse regex match The user may also have an option to configure NeoMonitor to only send out notifications for specific times. For example, notifications could be sent out to you every Monday. Other useful features: ? custom filter ? help file ? sample config files This application is written in VB.NET and has a friendly interface. NeoMonitor is a simple application designed to display information on the computer you are using. NeoMonitor Features: ? include port scan detection ? email notification ? log file storage ? allow you to login remotely ? email notification can be used in conjunction with NeoMonitor

## What's New In?

NeoMonitor is an application that was created to display, log, and alert you to tcp/ip connections to your computer. Intended for system administrators, network application developers and security conscious home users, NeoMonitor keeps you informed. Here are some key features of "NeoMonitor": ? include port scan detection ? email notification ? flexible logging filters ? customizable display settings Limitations: ? 15 days trial. How To Use NeoMonitor: 1) Start NeoMonitor 2) Go to the NeoMonitor Setup Menu 3) Go to the Configure Logging Options • You can select the various log and email settings. Also from this window you can change the display options. The display options are... NeoMonitor Interface Display mode Field Choose a field to display when the option is enabled select the display options and click to set the option. Configure to: Description: • Date • Time • Percentage • Absolute value • Length • IP address • Hostname • Date/time Check to see if the log entry is... • New • Enhanced • Alert Click on the log entry to check the value. NOTE: It is not possible to see the log entry when you are using a "no field" option. When you press the OK button, the log entry is added to your log. To check what a log entry represents, you will use NeoMonitor's own log viewer. • Open the log viewer • You will see the log entries listed by date and time. Now review the log, to see what it means. • Create a new log entry • Then use the log viewer to check the log entry. • Select "Create a new log entry" from the Log Configuration menu. To see what a log entry represents, you will use NeoMonitor's own log viewer. • Click on a log entry in the log viewer. • You will be taken back to the NeoMonitor log viewer • Open the NeoMonitor Examine Log File menu. • You will see the log entry that you have selected. You can also open the log file as a text file. In NeoMonitor, there are four options available for you to configure log settings. • Use a log file • Use a logging service • Email me when log messages occur
